Dear Reader:

In May 1987, when the U.S. District Court ordered the Bureau of Land Management to assess the cumulative environmental impacts of placer mining in four watersheds in Interior Alaska, there were very little existing resource data on the region in any centralized location. The initial step then for BLM was to compile as complete a bibliographic database as possible to which resource specialists could turn during the analysis and writing phases of the project.

In order to quickly proceed with this task, hundreds of scientific reports, agency papers and field investigations dealing with water quality, habitat and riparian disturbance, the Arctic environment, and the impacts to socio-economic resources were located. These documents helped enable the EIS team to reasonably analyze the effects that placer mining has had on the physical, cultural, and economic landscape. BLM also contracted with noted leaders in this field to provide further analyses of the existant data. All of these documents are part of the EIS project records and are included in this bibliography.

Because the project was a team effort many people helped in the development of the bibliography and without them it would not have been possible to accomplish. Noteworthy among these people were Linda Du Lac, Betty Ostby, Drs. Page Spencer, Tom Mowatt, Dick Dworsky and the always helpful and cheerful librarians of the Alaska Resources Library.

If you have any questions regarding this bibliography or would like additional copies, please write to Howard Levine at the above address (Attention 918) or call (907) 271-5055.
